

Reno Facility Adds New Automation

Things are looking up at the OnTrac facility in Reno, Nevada in more ways than one. The latest addition to their automation system now includes a new, two-storied framework of impressive conveyors and telescoping belts all aimed at moving packages more efficiently.

The incorporation of the optimized structure has reduced loading and unloading times by an extraordinary 80%, which translates into even later pickups and earlier deliveries to and from the Reno area.

This upgrade comes as a direct response to the growing number of large companies choosing OnTrac for all their west coast distribution and deliveries. This is especially true for the Reno facility, whose prime geographical location allows them to reach the entire OnTrac service area overnight—a huge competitive advantage for Reno-based businesses shipping to California and the metro areas of Arizona, Nevada, Oregon, Washington and Utah.

Faster deliveries and more aggressive rates are a welcome concept for any business these days. In fact, even in a down economy, the Reno facility has seen a 37% increase in volume this quarter alone; a sure sign that the new automation will be extremely busy.

OnTrac Makes Shipping Easy...Again

ontrac.com gets a new look & improved navigation

We've updated ontrac.com with a new intuitive navigation system and straight-forward layout to help you prepare your shipments faster so you can get on with your day.
